

## BIBLIOGRAPHIE

Des milliers d'articles scientifiques sont publiés chaque année dans des journaux scientifiques dont les articles sont soumis à l'examen critique des confrères. D'autres paraissent dans des rapports de symposiums ainsi que dans des magazines et revues scientifiques accrédités. Ces riches sources d'information ont été largement exploitées lors de l'élaboration des préceptes de l'alimentation naturelle. Il est tout à fait impossible de mentionner tous les articles qui nous ont influencés. La liste ci-dessous en est un échantillon. Ces articles sont essentiellement extraits de journaux scientifiques. Par souci d'économie de place, une périphrase du titre exact de l'article a souvent été utilisée. Les noms des revues en question ont, quant à eux, été abrégés par un acronyme. Vous trouverez leur signification à la fin de bibliographie.

De la même manière les références à des rapports et des ouvrages publiés ont été abrégées et sont suivies d'un (P). Vous trouverez également les détails d'édition en fin de bibliographie.
